Professional Profile

Backend developer with 6+ years of commercial Python experience. Specializing in building reliable, scalable services, complex integrations, and high-load systems. Before transitioning to development, worked for 8+ years as a technical writer and analyst, which developed skills in handling complex concepts, designing clear systems, and effective communication.

Key Competencies

- Service Development:** Full-cycle development on Django/DRF and async frameworks (FastAPI, AIOHTTP, Twisted).
- Security & Authentication:** Expertise in OAuth2, 2FA, JWT, proxy authorization, RBAC (role-based access control).
- Data & Infrastructure:** SQL optimization (recursive CTEs), Apache Kafka (high-load producers/consumers), ETL, containerization (Docker, K8s), monitoring (Grafana).
- Legacy Code:** Refactoring, Python 2 to 3 migration, test coverage.
- Tools & Approach:** Pytest, GitLab CI/CD, AI assistants (Cursor IDE) for faster development.

Tech Stack

Category	Technologies
Languages	Python 2/3, JavaScript (ES6+), SQL
Backend Frameworks	Django/DRF, FastAPI, AIOHTTP, Twisted, Pyramid
Databases & ORM	PostgreSQL, Redis, SQLAlchemy, Alembic, peewee ORM

Category	Technologies
Queues & Async	Apache Kafka, RabbitMQ, Celery
Infrastructure & DevOps	Docker, Kubernetes, Docker Swarm, Git/GitLab, Grafana, bash
Testing	Pytest, unittest
Other	REST API, OAuth2, JWT, Linux, HTML/CSS

Work Experience

Big Three (Bolshaya Troyka)

Company develops a universal application platform for business and government, as well as solutions built on it.

Period: August 2024 – December 2025 (1 year 5 months).

Tech Stack: Python 3, Django, DRF, Django Unittest + Pytest, PostgreSQL, Redis, Celery, RabbitMQ, Docker, Docker Swarm, GitLab.

Developed and deployed new features for applications built on B3 – the company's proprietary platform. Implemented integrations with third-party services, extensively used raw SQL for complex tasks, optimized queries, and debugged both application and platform code.

Key Achievements:

- Optimized complex SQL queries using recursive CTEs, reducing execution time of critical operations by 34% (EXPLAIN ANALYZE before/after) and lowering database load.
- Refactored legacy code of the B3 platform, eliminating 12 critical performance bottlenecks.
- Integrated Cursor AI assistant into the development process, improving efficiency in coding and debugging.

Gained hands-on experience with recursive CTEs in both raw SQL and Django ORM.

Samolet Development

Large real estate developer widely using IT for construction and property management.

Period: April 2023 – August 2024 (1 year 5 months).

Tech Stack: Python 3, Django, FastAPI, PostgreSQL, Redis, RabbitMQ, Celery, Apache Kafka, Docker, Pytest, Grafana, Kubernetes, GitLab.

Key Tasks & Achievements:

- **Authentication & Security:**

- Developed and deployed two-factor authentication (2FA) for a custom OAuth2 provider, securing 15+ corporate applications and protecting data for 8,000+ employees.
- Implemented social network authentication with mandatory 2FA when linking new accounts.
- Built a forced logout mechanism: revoking OAuth2 tokens and purging user sessions in Redis on password change or account deactivation.
- Designed an authorization proxy microservice on JWT for integration with corporate document management, reducing access approval time by 67% (metrics from ticketing system).

- **Backend & Integrations:**

- Developed high-throughput Apache Kafka producers and consumers processing 50,000+ events per minute with latency under 12 ms (Grafana metrics).
- Implemented an adapter service for data synchronization between equipment inventory and internal processing, automating handling of 3,200+ equipment units.
- Implemented RBAC for Apache Kafka, standardizing access management for 23 microservices.

- **Infrastructure & Monitoring:**

- Maintained architecture documentation using "architecture as code" with [DockHub](#).
- Developed Grafana dashboards for metrics monitoring.
- Participated in second-line support rotations, advising developers from other teams on OAuth2 integration.

- **Code Quality:**

- Actively covered code with unit and integration tests using Pytest, including legacy refactoring.

Gained experience with FastAPI, Apache Kafka, Kubernetes, Grafana, and OAuth2 implementation.

Globant

International IT company specializing in digital transformation and software development for large corporate clients.

Customer: Ubisoft – internal tool for visualizing defects in video games during manual testing.

Period: November 2021 – November 2022 (1 year).

Tech Stack: Python 2, Python 3, Twisted, PostgreSQL, Redis, Pytest, GitLab.

Key Projects & Achievements:

- Led full migration of a corporate application from Python 2 to Python 3. Refactored 88 modules for compatibility with the new interpreter version while preserving 100% functionality and API

backward compatibility. The project gained long-term support, improved security, and compliance with modern standards.

- Integrated Microsoft Azure AD as OAuth2 server to replace the customer's legacy custom auth token provider.
- Achieved 98% test coverage (pytest-cov) for critical code paths via integration tests.

Gained deep hands-on experience with the Twisted async framework and cloud auth provider integration (Microsoft Azure).

Lendsbay

Fintech startup building a P2P lending platform for secure loans between individuals.

Period: March 2020 — October 2021 (1 year 8 months).

Tech Stack: Python 3, AIHTTP, Pyramid, PostgreSQL, SQLAlchemy, Alembic, Celery, Redis, RabbitMQ, Docker, GitLab.

Key Tasks & Achievements:

- Developed the backend for a high-load mobile application Lendsbay with ~10,000 RPS to the database (source: pg_stat_database), ensuring service stability for tens of thousands of users.
- **Business Logic & Integrations:**
 - Built an XML parser for credit bureau data exports, using this data for periodic recalculation of the user's own credit score.
 - Implemented regular notifications to collection agencies about user payment delinquencies.
 - Designed an automatic penalty forgiveness algorithm with configurable rules, reducing customer churn by 12.3% (per business analytics).
- **Interfaces & Data Visualization:**
 - Built an interactive analytics system in the admin panel from scratch: dashboards with d3.js charts and advanced filtering for key business metrics.
 - Developed a functional prototype of the client web interface for UX hypothesis testing (personal initiative).

Gained deep experience with AIHTTP for high performance. Effectively used Pyramid for the admin interface and SQLAlchemy ORM for complex queries with Alembic migrations.

FinTech, JSC

Russian vendor and specialized developer of secure government information systems, platforms, and biometric solutions.

Period: March 2017 — December 2017 (10 months).

Tech Stack: Python 2, Django, Django REST Framework (DRF), PostgreSQL, Git.

Developed the backend for the PSZI "Sintez" platform – a system for automated management of administrative and economic units.

Key Tasks & Achievements:

- Participated in development and support of the platform backend based on Django and Django REST Framework (DRF).
- Developed REST API for frontend interaction and integration with related systems.
- Designed and implemented data models, ensuring integrity and efficient PostgreSQL operation.
- Participated in business logic development for management and accounting of administrative and economic resources.

Gained experience with Django REST Framework for API development and PostgreSQL in enterprise projects.

Freelance

Period: September 2016 – March 2017 (7 months).

Tech Stack: Python 3, Django, Bootstrap, jQuery, Git.

Key Projects & Experience:

- Internship at Corona Travel: successfully developed a learning project from scratch – a forum engine on Django with basic publishing and commenting. Completed entry-level practical tasks, consolidating commercial development and teamwork skills.
- Freelance projects: built a property rental management system on Django from scratch, including object database, payment calculation, and reporting. Created a corporate landing page for a financial organization with responsive Bootstrap design and jQuery interactivity.

Gained practical experience in Django backend development and UI implementation with Bootstrap and jQuery.
