

Maslin Maxim Mikhailovich

Male, 49 years old, born May 30, 1977

Email: zapzarap@yandex.ru — preferred contact method

MAX: max.ru/u/f9LHodD0cOJo6LfPoZriBTPNxYKVPwiMxcGpGqTTewSp5mwOzS946NvX8Ok

Telegram: [@dr_blumenau](https://t.me/dr_blumenau)

GitHub: github.com/mxmaslin

Location: Moscow, Shchukinskaya metro

Citizenship: Russia; authorized to work in Belarus and Russia

Relocation: Russia; open to business trips

Desired position

Senior Developer (AI, Django, FastAPI)

Specializations: programmer, developer

Employment type: full-time

Work format: remote, hybrid

Commute preference: not important

Work experience — 7 years 2 months

April 2026 — present · 2 months

Fooddvor · Moscow

Food products · fresh vegetables and fruits (promotion, wholesale)

Senior Developer (Python/PHP)

Product: WooCommerce online store, Telegram chatbot.

Stack: Python 3, FastAPI, Redis, Docker, GitLab CI, Pytest, WordPress/WooCommerce, HMAC.

Responsibilities:

- Writing program code
- Fixing identified bugs
- Developing and maintaining the server-side application
- Analyzing root causes of bugs to prevent recurrence
- Integrating software modules and assembling application components
- Developing and maintaining the client-side web application
- Developing and integrating APIs for data exchange between systems and applications
- Version control, tracking and managing code changes
- Managing the development team
- Reporting on development progress

Achievements:

- Built scalable asynchronous Telegram notification delivery when hosting in Russia has unstable access to api.telegram.org.
- Moved notifications off the critical order path.
- Eliminated checkout blocking risk from synchronous API calls.
- Designed the fooddvor-tg-relay microservice (FastAPI, clean architecture): HMAC, idempotency, Redis/SQS queue, worker → Telegram Bot API.

- Integrated WordPress: non-blocking send (2s timeout), fallback to direct API.
 - Implemented GitLab CI.
-

February 2026 — March 2026 · 2 months

Open Solutions · Penza

Information technology, system integration, internet · software development

Senior Python Backend Developer

Product: compliance platform, action plans module and workflow constructor.

Stack: Python 3, Django, DRF, drf-spectacular, PostgreSQL, Redis, Celery, RabbitMQ, Docker, GitLab CI, Pytest.

Responsibilities:

- Writing program code
- Fixing identified bugs
- Developing and maintaining the server-side application
- Reporting on development progress
- Analyzing root causes of bugs to prevent recurrence
- Integrating software modules and assembling application components
- Developing and maintaining the client-side web application
- Formatting code per customer requirements and industry/company standards
- Reviewing code written by other developers
- Version control, tracking and managing code changes
- Formalizing and algorithmizing tasks before implementation
- Developing and integrating APIs for data exchange between systems and applications

Achievements:

- Built REST API for action plan execution responsables (CRUD, permissions by company/groups/users); integration tests.
 - Implemented CRUD for plan and action status transitions in workflow (pre-/post-functions, validations, service layer).
 - Extended status API, restored Swagger/OpenAPI, stabilized GitLab CI.
-

August 2024 — December 2025 · 1 year 5 months

Big3 · Moscow

Information technology, system integration, internet · software development · enterprise integration, IT consulting

Senior Python Backend Developer

Product: B3 low-code platform for business and government.

Stack: Python 3, Django, DRF, Pytest, PostgreSQL, Redis, Celery, RabbitMQ, Docker Swarm, GitLab.

- Developed new features and integrations on B3 (customized Django); optimized raw SQL, recursive CTEs; debugged platform and applications.
- Implemented get_depth_level for hierarchical directory: depth in one SQL query, descendant updates in two.
- Optimized SQL with recursive CTEs, reducing critical operation time (EXPLAIN ANALYZE measurements).
- Fixed “zombie login” on GoTech: Keycloak end-session + redirect chain for frontend.
- Restored email delivery (Celery queue LOW→MEDIUM) and profile defect (root cause in low-code layer).
- Refactored legacy B3; started using Cursor in development.

Period takeaway: hands-on recursive CTEs in raw SQL and Django ORM. AI tools in development: Copilot, Windscribe; settled on Cursor with MCP, skills, rules and token consumption optimization as the main assistant.

April 2023 — August 2024 · 1 year 5 months

Samolet Development · Moscow

Financial sector · construction, real estate, development

Senior Python Backend Developer

Product: corporate IT services for a major real estate developer.

Stack: Python 3, Django, FastAPI, PostgreSQL, Redis, Kafka, Celery, Docker, Pytest, Grafana, K8s, GitLab, django-guardian.

- 2FA for OAuth2 provider S.ID (15+ applications, 8000+ employees); social login with mandatory 2FA.
- Forced logout: token revocation + Redis sessions on LDAP events.
- JWT proxy for ECM (−67% access approval time, ticket system).
- Kafka: GLPI adapter, 50,000+ evt/min, latency <12 ms; RBAC in kafka-manager (guardian).
- ITHub/DockHub documentation, Grafana, 2nd-line OAuth2 support, Pytest on refactoring.

Period takeaway: FastAPI, Apache Kafka, Kubernetes, Prometheus, Grafana; OAuth2 protocol implementation.

November 2021 — November 2022 · 1 year 1 month

Globant · Minsk · Ubisoft (Flare)

Information technology, system integration, internet · software development

Python Backend Developer

Product: Flare, Ubisoft internal tool for visualizing manual QA defects in video games.

Stack: Python 2/3, Twisted, PostgreSQL, Redis, Pytest, GitLab.

- Completed Python 2 → 3 migration (232 modules), preserving API.
- Implemented Microsoft Azure AD integration.
- High test coverage on critical modules (Pytest).

Period takeaway: deep practical experience with Twisted; cloud identity provider integration (Microsoft Azure).

March 2020 — October 2021 · 1 year 8 months

Lendsbay LLC · lendsbay.com · Moscow

Financial sector · financial and credit intermediation

Python Backend Developer

Product: P2P lending platform.

Stack: Python 3, AIOHTTP, Pyramid, SQLAlchemy, Alembic, PostgreSQL, Celery, Redis, RabbitMQ, Docker, GitLab.

Developed the server side of the high-load Lendsbay mobile app at ~10,000 RPS to the database (source: pg_stat_database), serving 100,000+ users.

Business logic and integrations:

- Built an XML parser for credit bureau exports, improving Lendsbay automated scoring accuracy.
- Implemented periodic notifications to collection agencies about overdue user payments.
- Designed an automatic penalty waiver algorithm with flexible conditions, reducing churn by 12.3% (per business analytics).

UI and data visualization:

- Built interactive analytics in the admin panel from scratch: d3.js dashboards with complex filtering for key business metrics.
- On own initiative, built a functional prototype of the client web UI to validate UX hypotheses.

Period takeaway: AIOHTTP, Pyramid, SQLAlchemy ORM, Alembic migrations.

March 2017 — December 2017 · 10 months

FinTech, JSC · Moscow

Information technology, system integration, internet · enterprise integration, IT consulting

Junior Python Backend Developer

Product: web service for administrative resource accounting.

Stack: Python 2, Django, Django REST Framework (DRF), PostgreSQL, Git.

- Developed and maintained backend on Django and DRF.
- Built REST API for frontend and integration with adjacent systems.
- Designed data models; ensured PostgreSQL integrity and efficiency.
- Developed business logic for administrative resource management and accounting.

Period takeaway: Django REST Framework and PostgreSQL in an enterprise project.

September 2016 — March 2017 · 7 months

Intern / Python Backend Developer · Moscow

Internship at Corona Travel:

- Built a forum engine on Django from scratch: posting and commenting.
- Completed entry-level tasks, strengthening commercial development and teamwork skills.

Freelance projects:

- Rental property accounting system on Django: property database, payment calculation, reporting.
- Corporate landing page for a financial organization with responsive Bootstrap design and jQuery interactions.

Period takeaway: Django backend, user interfaces with Bootstrap and jQuery.

Tech stack: Python 3, Django, Bootstrap, jQuery, Git.

Education

Higher education, 1998

Lomonosov Moscow State University, Moscow

Faculty of Philosophy, teacher training

Professional development, courses

Samolet Development — Alexander Trubnikov (Head of Centralized IT Services Department)

About me

Professional profile

Python backend developer with 7 years of commercial experience. I specialize in reliable scalable services, complex integrations, and high-load systems — from API design to metrics and CI/CD. Experience in OAuth2/security, Kafka, Django platforms, GRC/workflow, and e-commerce.

Before development, I spent 8+ years as a technical writer — which helps me design clear systems, document APIs, and use LLM/AI (Cursor) effectively. I can work with frontend (JavaScript, Vue) for fullstack tasks when needed.

Core competencies

- **Service development:** Django/DRF, FastAPI, AIOHTTP, Twisted; event-driven integrations, OpenAPI.
- **Security:** OAuth2, OIDC, 2FA, JWT, Keycloak, HMAC, RBAC (including django-guardian).
- **Data and infrastructure:** PostgreSQL, recursive CTEs, Kafka (high-load), Celery, Redis, Docker/K8s, Grafana/Prometheus.

- **Legacy and quality:** Python 2→3 migration, refactoring, Pytest, GitLab CI/CD.
- **Tools:** Cursor, MCP, documentation as code (DockHub/ITHub).

Technology stack

Category	Technologies
Languages	Python 2/3, JavaScript (ES6+), SQL, PHP (WP integrations)
Backend	Django/DRF, FastAPI, AIOHTTP, Twisted, Pyramid
Databases & ORM	PostgreSQL, Redis, SQLAlchemy, Alembic
Queues	Apache Kafka, RabbitMQ, Celery
DevOps	Docker, Docker Compose, Kubernetes, Docker Swarm, Git/GitLab, bash
Observability	Prometheus, Grafana
Other	REST API, OpenAPI/Swagger, OAuth2, JWT, Keycloak, Linux, WooCommerce
